

Please find $\frac{\partial^2 w}{\partial x^2} - \frac{\partial^2 w}{\partial y^2} = x - y$. [106中興精密9]

[解]微分運算子 $L = \partial_x^2 - \partial_y^2 = (\partial_x + \partial_y)(\partial_x - \partial_y) = L_1 L_2$

其中 $L_1 = \partial_x + \partial_y, L_2 = \partial_x - \partial_y$

L_1 的特徵方程式為 $\frac{dy}{dx} = 1 \Rightarrow x - y = C$, 令 $\xi = x, \eta = x - y$, 則

$L_1[u_1] = 0 \Rightarrow (u_1)_\xi = 0 \Rightarrow u_1 = f(x - y)$

L_2 的特徵方程式為 $\frac{dy}{dx} = -1 \Rightarrow x + y = C$, 令 $\xi = x, \eta = x + y$, 則

$L_2[u_2] = 0 \Rightarrow (u_2)_\xi = 0 \Rightarrow u_2 = g(x + y)$

得齊性解 $u_h = f(x - y) + g(x + y)$

設非齊性解為 u_p , 則 $L_1 L_2[u_p] = x - y$, 令 $L_2[u_p] = v \dots \dots \dots$ (i)

則 $L_1[v] = x - y \dots \dots \dots$ (ii)

令 $\xi = x, \eta = x - y$, (ii) $\Rightarrow v_\xi = \eta \Rightarrow v = \xi \eta = x(x - y)$

代入(i) $\Rightarrow L_2[u_p] = x(x - y) \dots \dots \dots$ (iii)

令 $\xi = x, \eta = x + y$, (iii) $\Rightarrow (u_p)_\xi = \xi(2\xi - \eta)$

$$u_p = \frac{2}{3} \xi^3 - \frac{1}{2} \xi^2 \eta = \frac{2}{3} x^3 - \frac{1}{2} x^2 (x + y)$$

解為 $w = u_h + u_p = f(x - y) + g(x + y) + \frac{2}{3} x^3 - \frac{1}{2} x^2 (x + y)$
